

No cost to OBGYN or Imaging Practice

Easy to Install, no additional software required

~Step-by-step configuration guide & 15 minute virtual conformation call with Cycle Clarity Implementation Specialist

Follicular Monitoring ultrasounds in less than 2 minutes, 10 seconds per ovary!

Encrypted transmission directly from ultrasound machine to REI

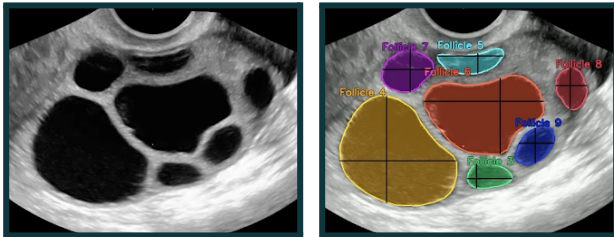

Cycle Clarity Connections

Empowering the Fertility Patient Journey

Cycle Clarity is an FDA cleared software platform that automatically detects and measures follicles, when monitoring a stimulation cycle, via 3D transvaginal ovarian sweep. These exams take less than two minutes with results being rendered in less than one minute. Annotated videos and data analysis can be transmitted to any participating Reproductive Endocrinologist of your patient's choosing.

Cycle Clarity receives ovarian sweeps comprising of 60 to 80 frames at a 1mm frame gap to give REIs a top to bottom view of the entire ovary to make decisions based on accurate AI derived follicle measurements. The image of the left is what is captured on the ultrasound machine, while the image on the right is the annotation provided by Cycle Clarity.

Patient Perspective

Cycle Clarity Connections, a cloud-based technology, seamlessly connects any OBGYN/imaging center with any REI, enabling patients to build their ideal fertility care team. This empowers patients to choose doctors based not only on location but also on success rates and treatment start availability. Current evidence prioritizes accurate ultrasounds over hormone monitoring within a treatment cycle, and Cycle Clarity Connections facilitates this process remotely, reducing patient commute time and expenses.

Connecting you to top providers, NOW!

Receive 90% of your IVF care with your hometown clinic

Reduced travel cost, time, and stress

Steps to Implement Cycle Clarity Connections

1. Contact Cycle Clarity to receive Implementation Documentation.
2. Configure DICOM Settings to send to Cycle Clarity
3. Schedule a call with a Cycle Clarity Integration Specialist to confirm test transmission!
4. Start Scanning your Patients at a Distance!

FAQs

- Cost?: There is **no** cost for implementation, training, or transmission of files. Patients pay a convenience fee.
- Can our practice charge for the ultrasounds? Yes. Your practice would charge its normal transvaginal GYN ultrasound fees. We will provide the recommended CPT codes.
- Compatible Ultrasound Equipment: 3D Capable with 3D Transvaginal Probe - connected to the internet!
 - GE Voluson Series, Mindray DC70, Philips Affiniti Series, Samsung V Series and HS40
- How does the fertility center review images? Patient selects her physician within our portal and we send results for review and approval. Using Cycle Clarity, REIs make simulation decisions and the fertility clinic will inform the patient of next steps.
- How many times will a patient need an ultrasound during an ART Cycle? OI or IUI will require 2-3 monitoring scans within a cycle. IVF will require 3-6 monitoring scans within a cycle.
- Will bloodwork be necessary? That will be directed by the fertility team, who can coordinate bloodwork with a local capable provider or other entity such as labcorp.
